

Environmental Radiation Surveillance Gamma Radiation Readings: Beginning 1995 Benefits

**Center for Environmental Health
August 2016**

Health Data NY

Benefits

The direct radiation data set can be used by the general public to evaluate environmental radiation levels at various locations in the vicinity of monitored facilities and/or background locations. It can be used by researchers and facility staff to see environmental radiation levels at vicinity locations. Facility operators may use data for inter-comparison and trending purposes. Previously, this data was compiled periodically, published in hard copy format and distributed to public libraries, facility operators and parties that requested the information.
