Creating Healthy Places Intervention Locations

Detailed Record Format

Description/Field Name	Definition
Activity	Activities represent the five broad groups that interventions are grouped into. Two activity areas include interventions that address opportunities for physical activity, and two activity areas include interventions that address improving nutrition. The fifth activity area represents interventions that address both physical activity and nutrition. A detailed description of these activity areas can be found in the Dataset Overview document.
Intervention	Interventions represent one of 18 possible policy, system or environmental approaches chosen by Creating Healthy Places contractors that are identified in the literature as promising or evidence based for improving nutrition or increasing opportunities for physical activity at the community level. A full list of the possible interventions can be found in the Dataset Overview document.
City	The city where the intervention is located
State	New York
Zip Code	The six digit postal code where the intervention is located
Location	Latitude and longitude for the location (or best approximation) of where the intervention occurred.
